

Greetings,

It's not too late to make things right for long-term care workers, medics and residents. Will you help?

We need federal legislation to establish national standards for long-term care facilities across Canada: hours of care, privacy, access to leisure activities, healthy food, safe buildings and PPE.

Why not national standards for inspection protocols based on regular but unannounced inspections?

Could there be dedicated federal transfers to provinces and territories for the provision of standardized long-term care?

Why not end for-profit centres for long-term care? Taxpayers are funding both sub-standard care and physical infrastructure in for-profit centres.

You or someone you love may be in a long-term care facility one day. What kind of legislation will you help put in place?

With hope ~
